

ANYONE

WHITEPAPER V 1.1

ANYONE LIMITED in Hongkong

ANYONE Ltd in Belize

WHITEPAPER V 1.1

1. General Outline

- Blockchain technology is not limited to the adoption of crypto currencies.
- It's used for cross-border transactions, as a currency alternative to on/offline, and there are many other potential markets.
- ANYONE has so far prepared a global service for its services that incorporate blockchain technology.
- It offers services that combine exchanges, games, dividends, investments, and the foundation looks for and grafts business models.
- In this whitepaper, you can check out the specific plans of Global Services, ANYONE.

WHITEPAPER V 1.1

2. Vision

- 2.1. Price stability
- 2.2. ANYONE Global Services
 - ANYONE-exchange
 - ANYONE-games
 - ANYONE-investments
 - ANYONE-dividends
- 2.3. Why do we need a continuous business model?
- 2.4. The ownership of coins

WHITEPAPER V 1.1

2.1. Price stability

- Many crypto currencies initially maintain high prices, but as time goes by, prices tend to fall sharply. This is based on the market economy logic, which is the ration of producers vs buyers.
- The production of crypto currencies was initially based on the Proof of Work (PoW) consensus, followed by the Proof of Stake (PoS) consensus and finally by the implementation of Masternodes (MN).
- However, if the amount of buyers are limited and the crypto currency developpers keep producing crypto currencies, eventually, prices must come down.
- As a result, ANYONE maintains its own PoW Logan Block chain after issuing all volumes.
- There is no sudden drop in prices because there is no additional volume of ANYONE in the market, only up to 45% of the issued ANYONE.
- In addition, some of the revenue from the foundation's business model is always used for price stabilization.

WHITEPAPER V 1.1

2.2. ANYONE Global Services

● ANYONE wants to provide global services.

● ANYONE-exchange:

Based on ANYONE, it supports the listing of many other currencies at a low public offering costs.

● ANYONE-games:

1 GAMECHIP is worth 1 usd.

This is guaranteed by the ANYONE Foundation.

● ANYONE-investments:

Purchases from ANYONE and GAMECHIP will yield a minimum of 6% to a maximum of 26% in three months.

● ANYONE-dividends:

Besides your ANYONE-Investment, you will receive a daily payment on a percentage basis of ANYONE Coin, which is based upon all business models operated by the ANYONE Foundation.

WHITEPAPER V 1.1

2.3. Why do we need a continuous business model?

- The value of ANYONE must be monitored in order to maintain price stability.
- Crypto currencies without a usecase, or that add no value, will become dust and can not compete, nor can they be priced.
- Therefore, to maintain the value of ANYONE, we need to develop a continuous business model.
- The ANYONE Foundation is researching and developing additional business models.

WHITEPAPER V 1.1

2.4. The ownership of Coins

- Many crypto currency ICOs or IEOs issue tokens. The majority of those tokens are non-tradeable and maintained on the Ethereum network.
- Using Mainnet, ANYONE can be traded at the owners will. To trade, ANYONE provides a windows android wallet and a web for games.
- This is held/owned by the owner of ANYONE compared to other tokens that can only be found in the Ethereum network.

WHITEPAPER V 1.1

3. Content of Global Services

- 3.1. ANYONE-games
- 3.2. ANYONE-exchange
- 3.3. ANYONE-investments
- 3.4. ANYONE-dividends

WHITEPAPER V 1.1

3.1. ANYONE-games

- The online casino market around the world is growing. Online casinos are the same as traditional casino games such as slot machines, roulette, and table games.
- Online casinos in North American markets have an overwhelming market share in slot machines, and European markets have a high market share in table games.
- Many countries are legalizing online casinos and it is becoming a cultural industry.
- Our services plan:

EVEN/ODD - in service

Taisai - the end of March

Baccarat - the end of April

Roulette - the end of May

Blackjack - the end of June

Texas hold'em - the end of July

SlotMachine - One game per month

WHITEPAPER V 1.1

3.2. ANYONE-exchange

- There are dozens of crypto coins generated every day.
- However, not many of those crypto coins can be registered on exchanges at the expense of large listing fees.
- ANYONE-exchange is based on ANYONE and is trying to maintain the value of crypto currencies with minimal listing costs.
- We will preemptively list crypto coins used by other games.

WHITEPAPER V 1.1

3.3. ANYONE-investments

- This is an investment platform based on Referral Marketing.
- The company purchases the investment by ANYONE or GAMECHIP and receives a certain amount of compensation every day.
- Each product has an interest rate. ANYONE purchases 120 days and GAMECHIP purchases 100 days.

● Product Guide

ANYONE Product - 120 days

100,000 ANY	every day 950 ANY	114,000 ANY
1,000,000 ANY	every day 10,000 ANY	1,200,000 ANY
10,000,000 ANY	every day 105,000 ANY	12,600,000 ANY

CHIP Product - 100 days

1,000 CHIP	every day 10,6 CHIP	1,000 CHIP
10,000 CHIP	every day 109 CHIP	10,900 CHIP
100,000 CHIP	every day 1120 CHIP	112,000 CHIP

WHITEPAPER V 1.1

3.4. ANYONE-dividends

- The trend of crypto currencies will be going towards paying dividends.
- The dividend rate, will be between 30% up to 60% of the revenue. However, it is difficult to determine the accuracy of the actual percentage of the total amount of coins that have been allocated according to the ever-increasing amount of crypto.
- Because ANYONE allocates 100% of its revenue and is a complete issue coin, the owner's dividend can be checked fairly and transparently.

A screenshot of the ANYONE platform's user interface. At the top, there is a navigation bar with links for 'INFO', 'DEPOSIT IN', 'DEPOSIT OUT', 'ALL LOCATION', 'LOCATION WITHDRAW', and 'LOGIN'. Below the navigation bar, the title 'My Deposit Info' is centered. Underneath this, there is a section titled 'Total AnyOne Coin' which displays the value '1,1000,070.83333501'. Below this section are two buttons: '\$ to deposit' and '\$ to withdraw'. At the bottom of the page, there is a table with three columns: 'Total Deposit Amount', 'Wait Deposit Amount', and 'Total Allocation Amount'. The table contains three rows of data, all showing values of 1,800,000 for 'Total Deposit Amount', 0 for 'Wait Deposit Amount', and 0.25650 for 'Total Allocation Amount'.

Total Deposit Amount	Wait Deposit Amount	Total Allocation Amount
1,800,000	0	0.25650
1,800,000	0	0.25650
1,800,000	0	0.25650

WHITEPAPER V 1.1

4. Existing Market Analysis and Proposals

- 4.1. Problems and Suggestions of Existing Crypto Online Casinos
- 4.2. ANYONE-exchange
- 4.3. ANYONE-dividends

WHITEPAPER V 1.1

4.1. Problems and Suggestions of Existing Crypto Online Casinos

- There are many online casinos that use crypto coins.
- But the problem with traditional crypto online cainos is reliability, depreciation and quality.
- Reliability refers to the reliability of servers and data as a result of the game's probability and defeat, and the depreciation is the real currency price due to the falling price of crypto coins.
- Quality refers to the level of professionalism of the content and graphics, integrated within the online casino platform or website.

WHITEPAPER V 1.1

Proposition 1. Reliability of Server

- Using Autoscaling AWS, RDS, and WAF, data is maintained using server reliability and Mirror service.

WHITEPAPER V 1.1

Proposition 2. Probability and outcome of victory

- The usag of the ANYONE mainnet has to prevent manipulation of probabilities.
- <https://explorer.any-one.org/>

The screenshot shows the ANYONE Explorer interface. At the top, there are four boxes: Network (GH/s) with 3.4274, Difficulty with 41.58033919644694, Coin Supply (ANY) with 20000006870.076733, and BTC Price with 0.00000000. Below these is a search bar with placeholder text "You may enter a block height, block hash, tx hash or address." and a green "Search" button. The main area is titled "Latest Transactions" and shows a table of 10 recent transactions. The table columns are Block, Hash, Recipients, Amount (ANY), and Timestamp. The transactions listed are:

Block	Hash	Recipients	Amount (ANY)	Timestamp
68685	376b39f9bb5cbe1111a5643f0a26cc20a3670d9a9c3d2a1808e2da824833a0ca	1	0.10000000	Mon, 18 Mar 2019 06:08:06 GMT

WHITEPAPER V 1.1

Proposition 3. Reliability due to Decrease in the Value of Money

- The chips used in games are valued at 1 USD and are guaranteed by the Foundation.
- 1 Chip maintains the 1USD price based on the ANYONE price at the time of the exchange.

ANYONE Cost	1CHIP
0.005\$	200ANY exchange
0.001\$	1,000ANY exchange

WHITEPAPER V 1.1

Proposition 4. Content and Graphic Quality

- We are currently operating a small game and will soon open additional content on a monthly basis.
- Currently, the planned additional contents are Dasai, Baccara, Roulette, Blackjack, Holdam, Slot Machine, and these are released each month.

WHITEPAPER V 1.1

Copyright 2019. ANYONE Limited all Rights reserved.

WHITEPAPER V 1.1

4.2. ANYONE-exchange

- Many exchanges only last for a few months, unable to survive in this highly volatile industry. This is partly because they charge crypto developpers huge publizing costs, which can't be financed by the new developpers.
- Expensive listing costs and crypto coin developpers deal only interact on a P2P basis, and are distributed at high prices due to broker intervention.
- When the crypto coin developper gets his coin listed, he will typically dump coins, to make up for the investment done for listing his crypto currency.
- After the developper has dumped, investors will follow, scared to loose even more of their initial investement. This vicious circle than repeats...

WHITEPAPER V 1.1

Proposal. Echange of Low-cost Publications

- Increase access for developers of crypto coins at low cost and affordable processes.
- Anyone who wants to own a specific crypto currency can directly determine the value of the crypto currency and can directly purchase or sell it through the exchange.
- ANYONE-exchange helps prevent broker intervention and fraud losses, the biggest problem with P2P transactions.

WHITEPAPER V 1.1

4.3. ANYONE-dividends

- We will allocate 30% to 60% of our revenues.
- However, it is impossible to validate your dividends as owners.
- This is because our crypto coins are still produced going - forwards, and the total outstanding coins is always growing.

Proposal. Transparent dividend

- The total amount of issuance is fixed and 100% of the revenue is allocated.
- The coin owner has an equity ratio if the quantity held is divided by the total amount of coins issued at that time.
- Therefore, the owner can verify the amount and dividend rate of the dividend at any time.

WHITEPAPER V 1.1

5. Coin Specifications

- The name of the coin is ANYONE and the ticker is ANY.
- The value of ANYONE is based on transactions with users who use our business models.

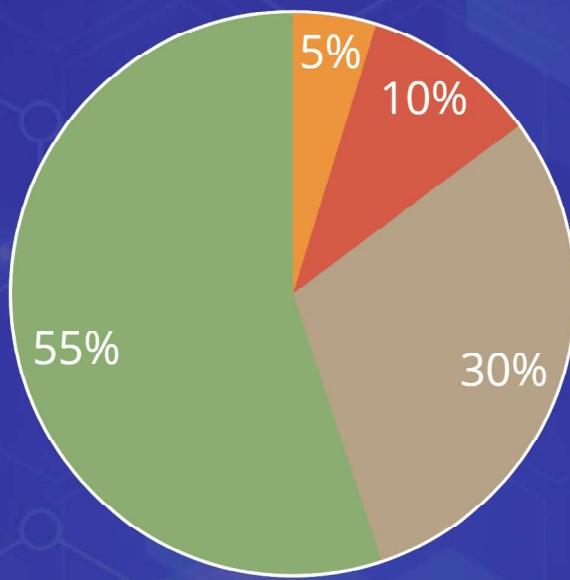

NAME	ANYONE
TICKER	ANY
ALGORITHM	SHA256
TYPE	POW
COIN SUPPLY	20 billion ANY
CONFIRMATIONS	100
BLOCK TIME	60 seconds

WHITEPAPER V 1.1

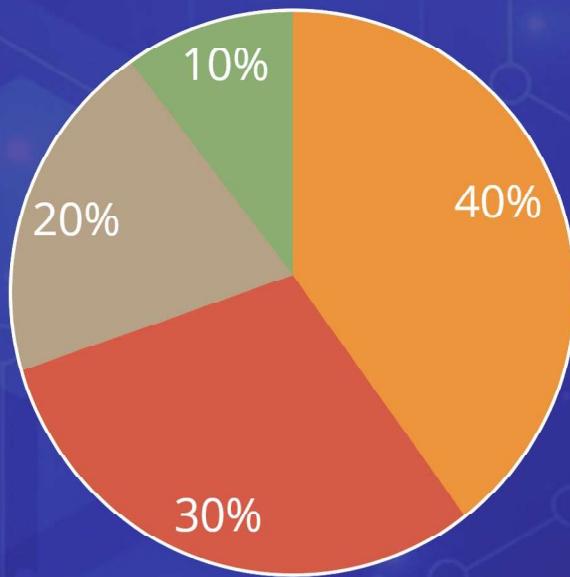

Allocation

- Private Sale
- Presale
- Funds
- ANYONE LTD

Funds

- Marketing
- Bounties
- Airdrops
- Operation

WHITEPAPER V 1.1

6. Conclusion

- As a global service-oriented company, ANYONE strives and engages in greater crypto currency ecosystems for users.
- We hope you will be able to trust and respect to be in this higher segment within the crypto industry.

7. Disclaimer
