

Whitepaper

Version 1.0

ANYONE LIMITED in Hong Kong

Anyone Ltd in Belize

1 General outline

- Blockchain technology is not limited to the function of crypto coin.
- It's used for cross-border transactions, as a currency alternative to on/offline, and there are many other potential markets.
- ANYONE has so far prepared a global service for its services that incorporate blockchain technology.
- Offers services that combine exchanges, games, dividends, and investments, and the foundation looks for and grafts on additional business models.
- In this white paper, you can check out the specific plans of Global Services, ANYONE.

2. Vision

- 2-1. price stability
- 2-2. ANYONE Global Services
 - ANYONE-exchange
 - ANYONE-games
 - ANYONE-investment
 - ANYONE-dividends
- 2-3. Why? Do we need a continuous business model?
- 2-4. The ownership a coin

2-1 Price stability

- Many crypto coin currencies initially maintain high prices, but as time goes by, prices fall apart from a few. This is based on the market economy logic, which is the ratio of producers to buyers.
- The production of crypto coin has been passed through POW and has been followed by POS and MASTERNODE.
- However, if the buyer is limited and continues to produce crypto coin, the price will inevitably fall.
- As a result, ANYONE maintains its own POW Logan Block chain after issuing all volumes.
- There is no sudden drop in prices because there is no additional volume of ANYONE in the market, only up to 45% of the issued ANYONE.
- In addition, some of the revenue from the foundation's business model is always used for price stabilization.

2-2 ANYONE Global Services

- ANYONE wants to provide global services.
- ANYONE-exchange :

Based on ANYONE, it induces the listing of many other crypto currencies at a low cost of public offering.

- ANYONE-games :

1 GAMECHIP is worth 1 dollar.

This is guaranteed by the ANYONE Foundation.

- ANYONE-investment :

Purchases from ANYONE and GAMECHIP will yield a minimum of 6% to a maximum of 26% in three months.

- ANYONE-dividends :

Except for ANYONE-Investment

You will receive daily payment on a percentage basis on the ANYONE Coin, which has the revenue of all business models operated by the ANYONE Foundation.

2-3 Why? Do we need a continuous business model?

- The value of ANYONE must be maintained to maintain stability in the price market.
- Coins with no place to use, no value at all, will become dust and cannot be priced.
- To maintain the value of ANYONE, we need to develop a continuous business model.
- The ANYONE Foundation is researching and developing additional business models.

2-4. The ownership a coin

- Many crypto currency ICOs or IEOs issue tokens. The majority of tokens are non-tradeable and maintain them over the Ethereum network.
- Using Mainnet, ANYONE can be traded at will of the owner. To do this, ANYONE provides windows android wallet and web wallet of games.
<https://github.com/anyonecore/AnyoneBinary/releases>
- This is held/owned by the owner of ANYONE compared to other tokens that can only be found in the Ethereum network.

3. Content of Global Services

- 3-1 ANYONE-games
- 3-2 ANYONE-exchange
- 3-3 ANYONE-investment
- 3-4 ANYONE-dividends

3-1 ANYONE-games

- The online casino market around the world is growing. Online casinos are the same as traditional casino games such as slot machines, roulette, and table games.
- Online casinos in North American markets have an overwhelming market share as slot machines, and European markets have a high market share in table games.
- Many countries legalize online casinos and become a cultural industry.
- Online casinos is one culture and is becoming leisure industry.
- <https://any-one.games> service plan
 - EVEN/ODD - in service
 - Taisai – the end of March
 - Baccarat – the end of April
 - Roulette – the end of May
 - Blackjack – the end of June
 - Texas hold'em – the end of July
 - SlotMachine – One game per month

3-2 ANYONE-exchange

- There are dozens of crypto coin being generated a day.
- However, there are not many crypto coin that can be registered on the exchange at the expense of a large listing.
- ANYONE-exchange is based on ANYONE and is trying to maintain the value of crypto coin with minimal cost of listing.
- Preemptively lease crypto coin used by other games

3-3 ANYONE-investment

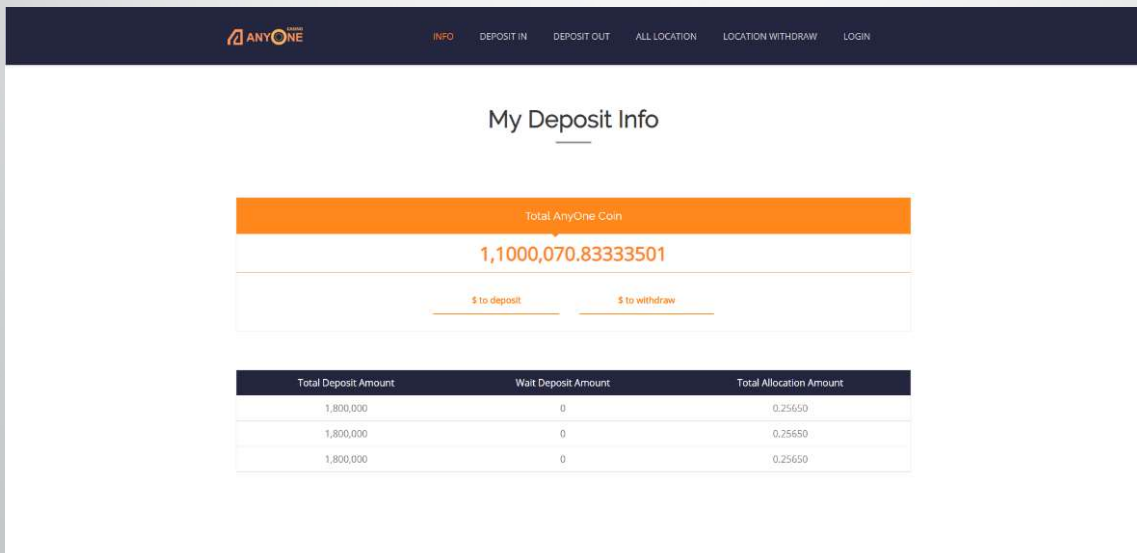

- This is an investment platform based on Reeferal Marketing.
- The company purchases the investment by ANYONE or GAMECHIP and receives a certain amount of compensation every day.
- Each product has an interest rate. ANYONE purchases 120 days and GAMECHIP purchases 100 days.
- Product Guide

ANYONE Product – 120 days a day		
100,000 ANY	every day 950 ANY	114,000 ANY
1,000,000 ANY	every day 10,000 ANY	1,200,000 ANY
10,000,000 ANY	every day 105,000 ANY	12,600,000 ANY

CHIP Product – 100 days a day		
1,000 CHIP	every day 10.6 CHIP	1,060 ANY
10,000 CHIP	every day 109 CHIP	10,900 ANY
100,000 CHIP	every day 1120 CHIP	112,000 ANY

3-4 ANYONE-dividends

- The trend of crypto coin is going to pay dividends.
- The dividend rate is said to be 30% to 60% of the revenue. However, it is difficult to determine the accuracy of the actual percentage of the total amount of coin that has been allocated according to the ever-increasing amount of crypto.
- Because ANYONE allocates 100% of its revenue and is a complete issue coin, the owner's dividend can be checked fairly and transparently.

4. Existing Market Analysis and Proposals

- 4-1 Problems and Suggestions of Existing Crypto Online Casino
- 4-2 ANYONE-exchange
- 4-3 ANYONE-dividends

4-1 Problems and Suggestions of Existing Crypto Online Casino

- There are many online casinos that use crypto coin
- But the problem with traditional crypto online casinos is reliability, depreciation and quality.
- Reliability refers to the reliability of servers and data as a result of the game's probability and defeat, and the depreciation is the real currency price due to the falling price of crypto coin.
- Quality is that there are many online casinos that use crypto coin, but the quality of content and graphics is poor..

Proposition 1. Reliability of Server

- Using Autoscaling using AWS, RDS, and WAF, data is maintained using server reliability and Mirror service.

Proposition3 Reliability due to Decrease in the Value of Money

- The chips used in games are valued at 1 USD and are guaranteed by the foundation.
- 1Chip Maintains the 1USD price based on the ANYONE price at the time of exchange.

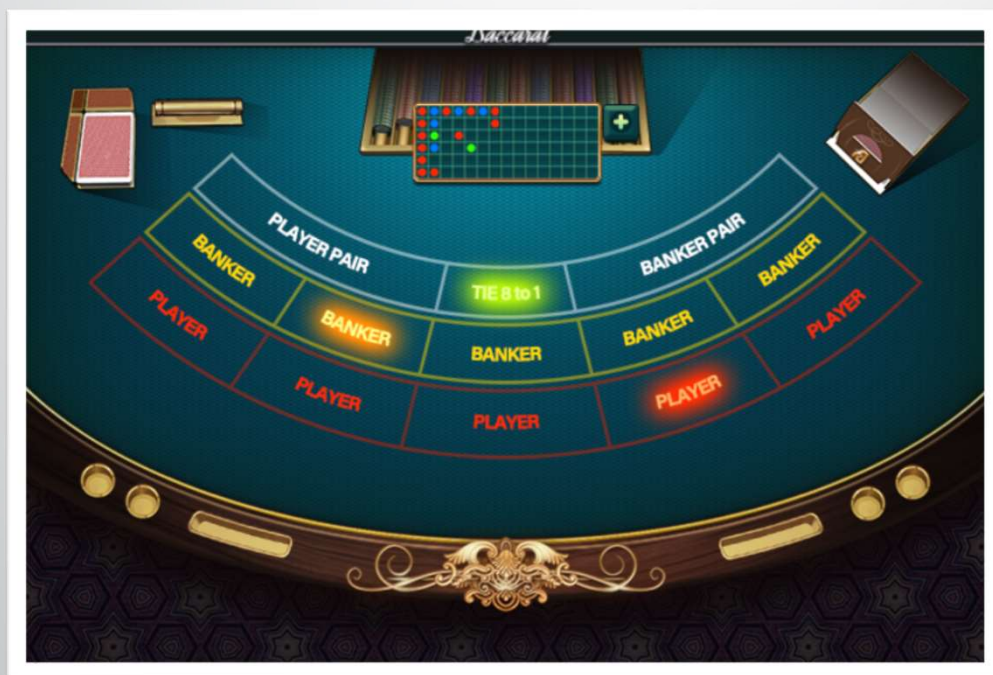

ANYONE Cost	1CHIP
0.005\$	200ANY exchange
0.001\$	1,000ANY exchange

Proposal4 Content and Graphics Quality

- We are currently operating a small game and open additional contents every month.
- Currently, the additional contents are Dasai, Baccara, roulette, Blackjack, Holdam, Slot Machine, and open one type each month.
- The open schedule for each content follows the roadmap.

- <https://www.any-one.games/home/Game2>
- <https://www.any-one.games/home/Game3>
- <https://www.any-one.games/home/Game4>

4-2 ANYONE-exchange

- Many exchanges are created and gone. However, the high cost of publicizing is not accessible to crypto coin developers.
- Expensive listed costs and crypto coin developers deal only on p2p, and are distributed at foaming prices due to broker intervention in the
- After that, when you put your name on the exchange, you'll see a lot of sales to collect the principal amount of coin from the users you have.
- Prices are down in large quantities, and owners continue to fall in order to sell them any faster.
- This is a vicious cycle that repeats.

Proposal. Exchange of Low-cost Publications

- Increase access for developers of crypto coin at low cost and affordable prices.
- Anyone who wants to own the crypto currency can directly determine the value of the crypto currency and directly purchase or sell it through the exchange.
- ANYONE-exchange helps prevent broker intervention and fraud losses, the biggest problem with P2P transactions.

4-3 ANYONE-dividends

- It is said that we will allocate 30% to 60% of our revenue.
- However, there is no way to validate your dividends as owners.
- Because the crypto coin is still produced and the total issue is always changing..

Proposition. Transparent dividend.

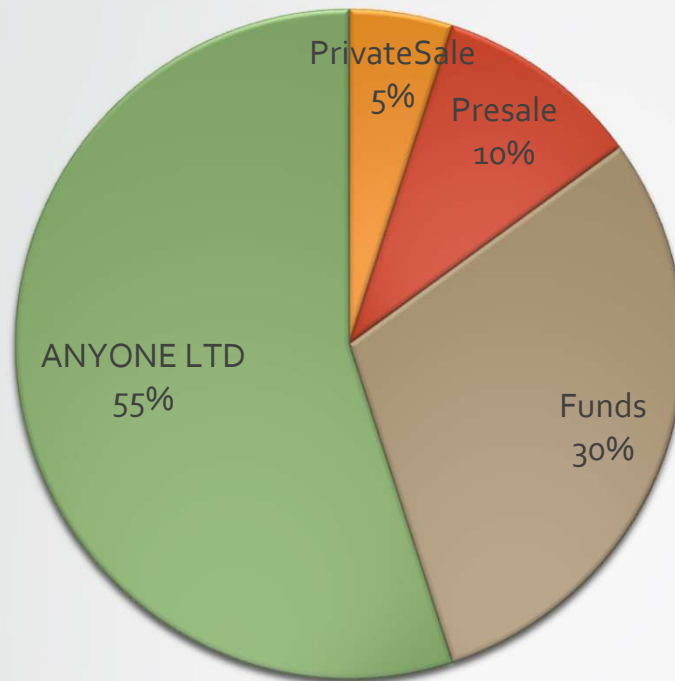

- The total amount of issuance is fixed and 100% of the revenue is allocated.
- The owner has an equity ratio if the quantity held is divided by the total amount issued.
- Therefore, the owner can verify the amount and dividend rate of the dividend at any time.

5. Coinspect

- The name of the coin is ANYONE and the ticker is ANY.
- The value of ANYONE is based on transactions with users using business models.
